

Waterfront-led evening expected

Raysut forecast for Monday 27 July 2026, 4:00pm-midnight (Oman time)

BOTTOM LINE

Plan for another waterfront-dominant service. No rain is forecast during trading. The gazebos should remain available as backup, but cover is unlikely to be the main customer priority.

27.7°C	33.4°C	82%	0 mm
AVERAGE TEMPERATURE	AVERAGE FEELS-LIKE	AVERAGE HUMIDITY	EXPECTED RAIN

How the evening should develop

TIME	CONDITIONS	RAIN	EXPECTED CUSTOMER BEHAVIOUR
4-6pm	30→28°C feels 35→34°C Humidity 69→78% breezy	0%	Strong waterfront preference. Best location for sunset arrivals.
6-9pm	28→27°C feels about 33°C Humidity 78→85% wind easing	0%	Waterfront remains strongest. Prime dinner sales period.
9pm-midnight	27→26.5°C feels about 33°C Humidity 85→91% very light wind	0%	Still waterfront-led. Dampness rises, narrowing its advantage.

Staff plan

1. Prioritise the waterfront Place the strongest service team and fastest-moving stock there for sunset and dinner. 2. Keep gazebos ready, not primary Maintain full readiness for families and anyone preferring shelter, but do not overstaff early.	3. Watch the late-evening moisture Check tables and seating after 10pm. Humidity approaches 90%, so surfaces may feel damp. 4. Reassess if drizzle appears If local khareef mist develops unexpectedly, quickly shift greeter direction and support to the gazebos.
---	--

Suggested demand split	4-10pm: 70-80% waterfront	10pm-midnight: 60-70% waterfront
------------------------	---------------------------	----------------------------------

Forecast note: This is an operating estimate, not a guarantee. Coastal khareef conditions can vary over short distances. The demand split is a planning assumption based on the reported performance of the two areas, not a forecast of exact sales.
